

Anti-Wrinkle & Dermal Filler

Anti-Wrinkle

For a fresh and visibly younger look, anti-wrinkle injections are used to treat fine lines and wrinkles.

- Anti-wrinkle injections are highly targeted, minimally invasive injections that help relax the muscles in areas common to the face, mouth and forehead.
- Made from a diluted natural protein, the injections block muscular contractions in the treated area.
- The result? It reduces the appearance and further development of wrinkles, crows feet, laugh lines and creases.
- With results expected to last 4-6 months, more and more people are turning to this efficient, painless and highly effective procedure to treat everything from fine lines to tight jaw muscles.

Dermal Fillers

Enhance the features of the face by adding Fullness and Volume to the skin to restore the youthful look you desire and improve the visible signs of ageing.

- Dermal fillers are minimally invasive injectables that deliver highly concentrated doses of Hyaluronic acid – a naturally occurring substance that plumps the lips, cheeks and skin.
- Due to the natural aging process, our existing levels of Hyaluronic acid decline each year. However, dermal fillers can bring buoyancy back to the skin and help minimise the appearance of asymmetries and fine lines.
- Fine lines and aging: Interested in winding back the clock without committing to anti-wrinkle injections? Dermal fillers can plump areas that have lost collagen, hyaluronic acid, and fat due to age. The result? Full skin that glows.
- Skin vibrancy: Interested in achieving a true inner glow? Select fillers can be injected to top up existing levels of hyaluronic acid when you want your skin to beam from the inside out.
- Asymmetries: Struggling with asymmetry? From cheek bones to lips, dermal fillers can help correct asymmetrical features to bring a little more balance back to your life.
