

Pico-Plus Laser

PICOPLUS is a laser platform which provides a premium anti-ageing skin treatments in a safe and gentle way to reduce visible skin pigmentation, fine lines and improve the overall tone and texture of your skin.

During the Pico Toning procedure, laser energy penetrates deep within your tissue in order to effect changes and use your own body's natural healing to improve the look of your skin.

The laser energy will reduce appearance of pigment, increase the collagen and elastin therefore reducing wrinkles and even out tone and texture. The PICOPLUS treatment is very gentle and, as a result, multiple passes can be used to effectively and safely treat deep within the skin.

How many treatments will I need?

In order to insure the safest treatment, your clinician may require multiple sessions to produce effective and long-lasting results. The number of sessions required depends on the severity of your condition and your treatment goals. Your clinician will recommend a treatment course that is right for you and will discuss the number of treatments required to meet your treatment needs.

Is there any downtime?

With minimal downtime and low incidence of side effects, you may immediately return to your daily activities. Ask your clinician about scheduling your PICOPLUS procedure today.

Does a PICOPLUS treatment hurt?

The majority of patients report almost no pain, only experience a slight warming of their skin and a light prickling feeling. Typically, no anesthesia or topical is needed.

How is PICOPLUS treatment different from traditional lasers?

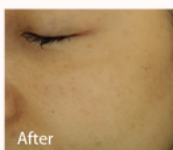

PICOPLUS delivers laser in picosecond duration which is 1000 times shorter than traditional lasers in nanosecond duration. When delivering laser beam in much shorter duration, pigmented lesion and tattoos are removed much better, and side-effects are far minimised.

Indications
