

CO2RE Fractional Laser

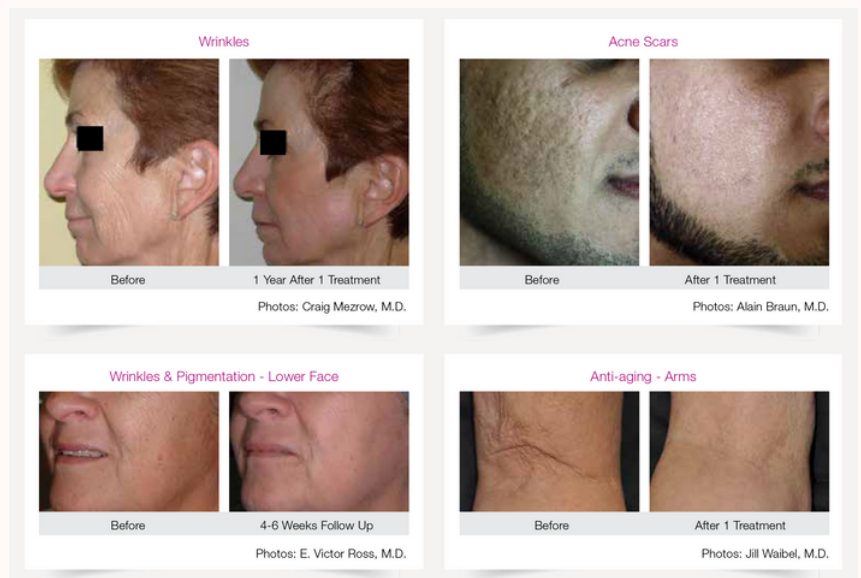

If your skin has lost some of its elasticity or is showing other signs of ageing – such as sun damage, blemishes, lines and wrinkles – our innovative CO2RE is a highly effective way of rejuvenating your appearance.

- This non-surgical treatment uses laser technology to remove a fraction of your skin's top layer, stimulating the production of collagen which helps to create new skin cells and give you a fresher, more youthful look.
- By tailoring the treatment to your specific skin condition, we are able to help you achieve a brighter, firmer complexion with a healthy, attractive glow.
- Our CO2RE laser technology is an advanced system that delivers proven, predictable and visible results.
- Treatments with our CO2RE laser system can be completed quickly, with limited downtime required post-treatment.

A versatile fractional CO2 Laser system that enables precise targeting and effective treatment of the skin's surface, middle and deep dermal levels, plus traditional CO2 resurfacing and laser excision of lesions.

It offers proven solutions for skin resurfacing, wrinkle and scar reduction, pigmentation, minor dermal incisions and excisions.

CO2RE allows for the treatment of both superficial and deep skin layers simultaneously with precision control over the intensity, pattern and depth of ablation – all from a single platform.

Indications

- CO2 Skin Resurfacing
- Wrinkle Treatment
- Striae (Stretch Marks)
- Acne Scars
- Scars
- Dyschromia (discolouration)
